## Application recommendations

If there are any residues of thermal paste from previous installations on the CPU or heatsink, please clean them off first.

Thanks to its excellent spreading properties, there is no need to manually spread NT-H1 before installing the cooler: simply apply a small dot of paste onto the CPU (multiple dots for larger CPUs, see details below), put on the heatsink and you're ready to go!

CPU size	CPU type	Number of dots	Dot pattern
<b>SMALL</b>	e.g. Intel LGA115x / 1200	1 dot with 3-4mm diameter	
<b>MID</b>	e.g. AMD AM4, Intel LGA1700, LGA20xx	1 dot with 4-5mm diameter	
<b>BIG</b>	e.g. AMD TR4, Intel LGA3647	9 dots with ~2mm diameter and 4 dots with 3-4mm diameter	

Caution: Applying too much thermal paste can lead to higher CPU temperatures.

## Removal and cleaning

Use a dry paper towel or tissue to wipe off, then moisten a paper towel or tissue with a few drops of water to wipe clean. Isopropyl alcohol or cleaning wipes such as NA-SCW1 can be used but are not necessary.

## Safety

Do not ingest. Seek medical advice immediately if ingested.

Keep away from children and pets. Avoid skin or eye contact.
