## Application recommendations

If there are any residues of thermal paste from previous installations on the CPU or heatsink, please clean them off first.

Thanks to its excellent spreading properties, there is no need to manually spread NT-H2 before installing the cooler: simply apply some small dots of paste onto the CPU (see details below), put on the heatsink and you're ready to go!

CPU size	CPU type	Number of dots	Dot pattern
SMALL	e.g. Intel LGA115x/1200	1 dot with 3-4mm diameter	
MID	e.g. AMD AM4, Intel LGA1700, LGA20xx	4 dots with ~2mm diameter near the corners plus 1 dot with 3-4mm diameter	
BIG	e.g. AMD TR4, Intel LGA3647	9 dots with ~2mm diameter and 4 dots with 3-4mm diameter	

**Caution:** Applying too much thermal paste can lead to higher CPU temperatures.

## Removal and cleaning

Use included NA-CW1 wipes or paper towel moistened with isopropyl alcohol to clean. If slight residues remain after cleaning with NA-CW1 wipes, you can use a paper towel or tissue to polish. However, such residues are of visual concern only and will not impair performance. If you need further NA-CW1 wipes, please purchase the NA-SCW1 set (20 pieces).

## Safety

Do not ingest. Seek medical advice immediately if ingested.  
 Keep away from children and pets. Avoid skin or eye contact.
